### **DETAILED ACTION**

1) A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/24/2005, has been entered.

In Amendment received 1/24/2005, Applicant amends claim 1.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2) Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Kaoru (JP-4-130190). Kaoru discloses a method of cleaning a surface of a papermaking rotating dryer drum wherein a release agent, an emulsified oil solution, is applied to the surface of the drum by direct spraying onto the surface. The oil penetrates the asperities on the surface of the drum and forms a film on the surface of the drum. The oil is then absorbed by the cellulose fibers of a paper strip, which rides on the drum. Example 3 discloses continuous spraying at a rate of 2.0 l/min. onto a surface of a

Yankee drum dryer, without staining the paper strip by the release agent (Kaoru, translation, pages 2-5).

### ***Response to Amendment***

3) Applicant's arguments filed 1/24/2005, have been fully considered but they are not persuasive.

In regard to independent claim 4, Applicants allege that the cited prior art, Kaoru, does not anticipate the invention in that it does not specify the spray rate in terms claimed.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the spray rate) is not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1731

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4) Claims 1-6, are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7, of U.S. Patent No. 6,858,113.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both the present application and the patent disclose a method for preventing contamination of a surface of a dryer drum used in a papermaking machine that includes the treatment of the rotating drum surface while facing a paper strip, with a surfactant containing oil at the rate of spray application that is within the range claimed, filling up recesses in microscopic asperities on the surface of the drum and transferring a resin film onto the drum. The claims even though are not identical, they are not patentably distinct.
